

ECM in the Cloud

Document management, enterprise content management, digital transformation – whatever label you use, it's vitally important to the efficiency of your organization. Combine it with the power of the cloud and you have a solution that has the potential to transform your organization so it works smarter and faster. Enterprise content management (ECM) in the cloud continues to grow, in fact, **99.5%** of organizations plan to deploy some form of ECM in the next three years.

80% of organizations have on-premise ECM.

70% of organizations have cloud.

In a survey conducted by Ovum, respondents said that these were the most important reasons to deploy ECM in the cloud:

No large upfront investment

96%

No in-house maintenance

86%

Integration to mobile

85%

The same survey found that respondents saw these three ECM functionalities as being most important reasons to deploy ECM in the cloud:

Document storage

66%

File sharing

64%

Workflow

59%

Cloud security is top of mind for business owners and IT professionals. Out of the respondents surveyed, **93%** said they are concerned about data being intercepted in transit. These are three key things to consider when deploying ECM in the cloud:

Internal Data Breaches

Vendor Service Level Agreements

Content Encryption
